Encounters between cultures are also encounters between knowledge systems. This volume brings together a number of case studies that explore how some knowledge in cultural contact zones becomes transient, evanescent, and ephemeral. The essays examine various aspects of cultural, especially colonial, epistemic exchanges, placing special emphasis on the fate of those knowledges that are not easily appropriated by or translated from one cultural sphere into another and thus remain at the margins of cross-cultural exchanges. In addition, the imposition of colonial power is unthinkable without the strategic deployment and use of knowledge; most colonial states, including those of Germany in the Baltic and in West Africa, were knowledge-acquiring machines - yet, acquisition always includes rejection, detainment and subjugation of recalcitrant epistemes. Bringing together insights from various scholarly disciplines, including literary studies, history, historical anthropology, and political science, the essays in this volume investigate how different or unfamiliar knowledge was, and in some cases still is, disarticulated by being belittled, discredited, and demonized. But they also show the strategies of resilience deployed by subjugated and subaltern people: the ways in which certain materials have escaped the colonality of knowledge - how fragments and shards of other epistemologies remain inscribed in the polyphony and fuzziness of intercultural documents and archives.

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.
